NEW SPIDER RECORDS FOR NEW YORK STATE.

BY BORYS MALKIN, New York, N. Y.

During the season 1940 I collected a number of spiders, some of which are new records as listed below:

Teridion albidum, Bks.—New Rochelle, June. New to "Continental" New York.

Eugnantha pallescens Cambr.—Wantagh, Long Island, June. New to Long Island.

Tetragnatha lacerta Walck.—Montauk, L. I. June 16, 2 females. New to New York State.

Philodromus lineatus Em.—Wantagh, L. I. June. New to L. I.

Philodromus ornatus Banks—Wantagh, L. I. June. New to L. I.

Xysticus discursans Keys—Yonkers, May, 2 males. This species is not truly new to the State, Gertch recorded it from the State including L. I. (Bul. Am. Mus. Nat. Hist., Vol. LXXVI, Art. VII, pp. 364-5).

Xysticus fraternus Bks.—Bear Mt. June. New to "Continental" N. Y.

Xysticus versicolor Keys—Nyack, March. New to "Continental" New York.

Tibellus marinum Menge.—Montauk L. I. June 16, single female, Gertch.

According to Gertch, the species is quite common in North Atlantic States. Apparently missed in the list.

All of the above specimens were identified by Mr. W. J. Gertch.
